## Personal Investing <br> Part A

Understanding \& applying investment fundamentals

An educational program for individuals and families anticipating or now in retirement

Hosted by York University's Retirement Planning Centre

# Personal Investing Part A 

Understanding \& applying investment

## An investment in knowledge pays the best interest <br> Benjamin Franklin

fundamentals

There are only two ways of making money. The first way is by working for it. The second way is by putting it to work for us! Making our money work as hard as possible is very important. However, we must understand how to make our money work hard and also understand what risk really means. For many of us "risk" means simply losing our money, but risk can mean a lot of different things. Your personal risk tolerance, time horizon, investment objectives and financial goals guide you to the appropriate investment choice.

This course will explore the concepts of investing so that you will have the necessary tools to understand and work with financial service providers.

Investing starts with creating a surplus in your cash flow, which creates savings. Savings not required for immediate needs may then be invested. For the purposes of this program, investing will refer to the methodical allocation of surplus funds to various investments in order to generate interest, dividends or capital growth, while at the same time managing risk. In all cases we are referring to quality investments... NOT SPECULATION.

## First Sovereign Investment Management Inc.

- Financial education and counselling
- Objective, unbiased courses
- Network of alliances with qualified professionals

## Learning Objectives

- To have a basic understanding of 10 different types of investments
- To realize how your financial goals, investment objectives, time horizon and risk tolerance impact your investment choice.

What do you want to learn in today's session?
List 2 or 3 main points.

## Agenda

- Introduction
- The Financial Planning Process
- Types of Investments
- Your Company Investment Plan
- Investment Objectives
- Investment Risk
- Case Studies
"Cheshire Cat, would you tell me, please, which way I ought to walk from here?" "That depends a good deal on where you want to get to," said the cat. "I don't much care where," said Alice. Then it doesn't matter which way you walk," said the cat "...so long as I get somewhere," Alice added. "Oh you're sure to do that" said the cat, "if only you walk long enough!"
- from Alice in Wonderland

## Financial Planning Process

1. Establish financial objectives.
2. Gather, process and analyze relevant information.
3. Develop a financial plan.
4. Implement the plan.
5. Monitor the plan, and make changes as necessary.
6. An objective is what you want to achieve. Objectives give purpose to your plan. Objectives should be Specific, Measurable and Attainable.
7. Have a clear and concise picture of your current financial situation. Examine your assets, liabilities, income and expenses.
8. Develop strategies to achieve your objectives. Strategies are specific actions, including time frame and dollar amount(s) that will help you to achieve your objectives.
9. It is essential to follow through and carry out your plan.
10. Review your plan annually or with life changes. Modify your plan to meet changing needs and abilities as well as external changes.

## Investment Types

- Loaner
- Owner

Everything else is a variation on the theme.

## INVESTMENT TYPES AND TERMINOLOGY

Contrary to popular belief, there are only two basic types of investments. As an investor you are either a "LOANER" or an "OWNER". All investments are variations on this theme.

## LOANER INVESTMENTS

You lend money (capital) to an individual or organization (a borrower) in return for a promise to pay from that individual or organization. The promise to pay includes the time when the money will be repaid as well as the amount of interest that will be paid for use of that money. Interest is the time value of money. Typical loaner investment might be a term deposit purchased at the bank. They can also include bonds, debentures and mortgages.

## OWNER INVESTMENTS

You buy all or part of an enterprise - making you a full or partial owner. You have an equity position and you share fully in the profit or loss of the investment. The most common equity ownership we are familiar with is our home. However, investments into shares of companies also give us ownership or an equity position. Our share of profits and losses are determined by our relative ownership. Equity investments generate dividends, which is a share of the company's profits. The increase in value of our shares is referred to as capital growth (capital gains for tax purposes). Likewise, a reduction in value of our shares is referred to as a capital loss. investments generate dividends, which is a share of the company's profits. The increase in value of our shares is referred to as capital growth (capital gains for tax purposes). Likewise, a reduction in value of our shares is referred to as a capital loss.

## Primary Financial Markets

- Money
- Bond
- Equity

## Other Investment Markets

- Private Equity
- Real Estate (a form of private equity)
- Private lending
- Derivatives, structured products, insurance
- Other assets
- Metals/Commodities/Livestock
- Patents, trademarks, patents
- Collectibles

## Financial Markets:

"Loaner " investments are purchased or traded in two different markets. These are known as the Money Market or Bond Market.
"Owner " investments are purchased or traded through the Equity Market.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Bond Market

## - Government

- Corporate
- Infrastructure/Specialty Situations

## Bonds

Bonds are debt instruments. Issuers (borrowers) promise to pay the purchasers (lenders) the face value of the bond at the maturity date as well as regular fixed interest payments.

Bonds are issued by all levels of government as well as corporations. Bond rating services are available to assess risk. A long-term bond can have a 30 -year maturity. Bonds are actively traded on the secondary market.

- Example: 10 year Government of Canada Bond paying $3.55 \%$ interest/yr, paid semi-annually
- Example: 10 year Bell Canada bond paying 4.7\% interest/yr, paid semi-annually.

Individual Exercise: Bond Returns

| Bond Returns - Counterintuitive? |
| :--- |
| Original Purchase: |
| 2-year bond purchased for $\$ 100$ face value |
| Will pay interest once per year of $4 \%$ of face value |
| (regardless of fluctuating market) |
| Will payback face value when it matures |
| One year later |
| Interest rates for new bonds shift |
| That 2-year bond now has one year left to maturity (it's |
| essentially like a one year bond) |
| What would someone be willing to pay for your bond? |

Complete the following approximation table based on a shift in interest rates.

|  | Interest <br> Rate <br> (coupon) | Total <br> Interest <br> in 1 year | Face Value <br> Paid Back <br> at Maturity | Total | Price <br> Today |
| :--- | :---: | :---: | :--- | :--- | :---: |
| Case 1 <br> New Bond | $3 \% \$$ | $\$$ | $\$$ | $\$$ |  |
| Case 2 <br> New Bond | $5 \%$ | $\$$ | $\$$ | $\$$ | $\$$ |
| Your Bond | $\%$ | $\$$ | $\$$ | $\$$ | $?$ |

What is your bond worth?
Under Case 1:
\$
Under Case 2:
\$ $\qquad$
Note: in this exercise we didn't account for some minor variations that have little effect on short term bonds but that would have more impact on long term bonds.

## Conclusion

As interest rates go up, the value of a bond goes $\qquad$ .

As rates go down, the value of a bond goes $\qquad$ .
Bonds can trade at par, at a discount, or for a premium.

## Equity Market

## - Preferred Shares <br> - Common Shares

## Preferred:

- Entitles the investor to a fixed dividend ahead of the common shareholders.
- Entitles the investor to a stated value per share in the event of liquidation.
- Usually no voting rights.

## Common:

- Voting privileges.
- Potential capital appreciation.
- Possible dividend income.
$\qquad$
$\qquad$

## Anatomy of the Investment Industry

## Stock Exchanges <br> (Toronto, New York, ...)

ป

## Mutual Funds

Mutual funds aid the small investor in strategic investing. Mutual funds allow the small investor to fully diversify a portfolio in an efficient manner.
Mutual funds are not new. They have been in existence in Canada since the early 1920s. A mutual fund represents a number of investors who pool their money together to buy a collection of investments and mutually benefit or share the risk. Each investor is allocated a share of interest referred to as a unit. The Fund Manager purchases and sells investments for the unit holders. For this activity, the Fund Manager is compensated through the management fees charged to the fund.
Mutual Funds may be Income Funds, which are a collection of loaner type investments such as bonds, mortgages, government T-Bills and other similar investments. They may also be Growth Funds, which primarily invest in equity investments. If there is a combination of loaner and owner investments, these are generally referred to as Balanced Funds.

## Why Mutual Funds?

## Pros

- Low trading expense
- Access to niche markets
- Widely available
- Can handle small clients
- Smooths returns from individual holdings
- Consumer regulation may block questionable investment styles

Cons

- High marketing expense
- Client communications
- Can get too big
- No client size pricing
- No individual tax strategies
- Conflicts of interest
- Rebalancing is tougher
- Hard to attract the best talent
- May promote fad investing

## Investment Objectives

- Safety of Capital
- Liquidity
- Income
- Growth
- Tax Minimization???
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Safety of Capital

The investor wants his/her principal to remain intact.

## Liquidity

The investor wants the ease to convert his/ her investment to cash.

## Income

The investor wants to receive regular income from his/her investment in the form of interest and dividends.

## Growth

The investor wants to see the original value of his/her investment increase. This is also known as capital growth or capital appreciation

## Investment Risk

- Definition
- Types
- Measurement
- Historical Performance
- Personal Comfort
- Conclusions

Investment Risk Investment risk is defined as the uncertainty of the return on an investment. The risk definition that most of us think of is loss of capital. The way we measure risk is by its variability.

## Types of Investment Risk

- Inflation
- Interest Rate
- Market
- Financial - Company Specific
- Exchange Rate
- Liquidity

Investment risk can be broken down into the following categories:

Inflation
The potential that increases in price will erode the purchasing power gain of an investment

Interest Rate
The potential that investments are locked in at a lower rate when interest rates are rising and/ or receiving lower rates than anticipated.

Market
The potential that investments are exposed to fluctuations within the market.

Financial
The potential that the company invested in will not be profitable, or will default.

## Foreign exchange

The potential that investments in foreign currencies fluctuate relative to the Canadian dollar.

Liquidity/Marketability
The potential that there will be an inability to liquidate your investments in the case of emergency or unexpected need.

Generally speaking, investment risk is proportional to investment return. The greater the risk, the greater the potential return.

Given the risk-return linkage, the big question to consider is the following one: "is rate of return that important?" To answer this question, we must consider the time horizon of our investments. When we look at our time horizons, in the short term rate of return plays a lesser role. But in the long term, rate of return is exceedingly important.

## Historical Performance

Using the historical return chart provided, answer the following questions for each of the asset classes:

1. How many years provided a positive return above 10\%? Above 20\%? Above 30\%? Above 40\%?
2. How many years provided a negative return? Below 10\%? Below 20\%?
3. What was the average return for the period?
4. What would happen to the average return if the period was shortened to five years?
5. What conclusions can be drawn about the three asset classes?

## Does History tell the Future?

"History doesn’t repeat itself but it does rhyme."

- Mark Twain

Historical returns are no guarantee of future performance.

## Making History

## What events have impacted investment

 returns?- Japanese boom and bust
- 1970s inflation
- 1981 interest rate
- 2001 dot-com and dot-bomb
- 1980s housing market (for Calgarians)
- Currency devaluations (Mexico, USA, etc.)
- 2006 income trust ruling
- 2008 banking crisis

Time
Short term 0 months to 3 years
Medium Term 3 years to 10 years
Long term

Let's take a closer look at the role that rate of return plays in the long term. Our retirement savings provide an excellent example. Our time horizon is not just to retirement, since those funds must continue to work for our lifetime. For most of us that can be a 30 year, 40 year or 50 year time horizon.

The significance of rate of return over that time period can be illustrated through "THE RULE OF 72". The rule of 72 states that:

## "72 divided by the Rate of Return equals the number of years

 it takes to double your money." (The result is an approximation)Individual Exercise: Rule of 72
Assume an investment of $\$ 1000$ over 36 years

1) Years to double: $=72 /$ rate of return
2) Times investment will double over 36 years
3) Circle the correct end value

| Return |  | $\begin{aligned} & \hline \text { Times } \\ & \underline{\text { in } 36} \\ & \hline \underline{\text { Years }} \\ & \hline \end{aligned}$ | 1x | $\underline{2 x}$ | 3x | 4x | 5x | $\underline{6 x}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6\% |  |  | 2000 | 4000 | 8000 | 16000 | 32000 | 64000 |
| 8\% |  |  | 2000 | 4000 | 8000 | 16000 | 32000 | 64000 |
| 10\% |  |  | 2000 | 4000 | 8000 | 16000 | 32000 | 64000 |
| 12\% |  |  | 2000 | 4000 | 8000 | 16000 | 32000 | 64000 |

## Personal Comfort (Risk tolerance)

## It's all about emotions

- Greed vs. Fear
-changes with age -changes with life events
o think of something that made you feel like taking a chance
o think of something that made you feel like returning to safety

YOU must find a PERSONAL balance

## How can I reduce Investment Risk?

- Diversification

This is generally done through the activity of diversifying.

This means that your investments have methodical and logical placements in a variety of dimensions.

## Case Study \#1

Jasmine is planning on buying a house in two years. She has worked hard for the past three years to save for the down- payment and plans to put away an additional $\$ 500$ per month for the next two years.

She has been using a savings account at her bank.
A friend told her about a mutual fund that earned $25 \%$ last year.

Jasmine is considering transferring her savings to that mutual fund so she can buy her house sooner.

## Case Study \#3

June and Andy are 15 years away from retirement. They know that the company and government pensions will not be enough to provide the lifestyle they want in retirement.

They already have a small amount of money saved, but plan to focus on increased regular contributions to retirement savings over the next 15 years.

Andy is willing to assume high risk for the potential high returns. June is scared of losing their money, and is already losing sleep at the thought of it.

## Strategic Wealth Management

## Preparing for Retirement - A: Getting Started

"If you don't know where you're going, any road will take you there."-George Harrison. Are you on path to achieve your goals? In this workshop we focus on putting a process in place to achieve your goals. We focus on cash management strategies and the wealth management process. Secure the foundation of your financial plan

## Personal Investing - A: Core investing components applied

"Fads are the kiss of death. When the fad goes away, you go with it."-Conway Twitty. Understanding core concepts will help you identify and protect yourself against investment fads and build a solid investment strategy. In this workshop we talk about investment components, types of risk and how to avoid them, and the factors that contribute to your successful investment strategy.

## Personal Taxation - A: Introductory concepts in tax minimization

"Income tax has made more liars out of the American people than golf has." -Will Rogers. Give yourself credit! Credits, that is... and deductions. This workshop looks at how our progressive tax system works and explores some of the core tax reduction strategies we should consider for LEGALLY minimizing our taxes.

## Life Insurance \& Estate Planning: Understanding the importance of security \& structure

"Certainty? In this world nothing is certain but death and taxes." -Benjamin Franklin. Dying. The material impact of death is not something we really want to think about, much less talk about. But, it's something we need to know about. This workshop will look at the various components of a well-structured estate plan, including wills and will preparation, insurance (needs, amounts, types), Powers of Attorney and a brief introduction to trusts.

## Personal Investing - B: Investment planning concepts \& strategies

"More important than the will to win is the will to prepare." -Charlie Munger. Take the next step in your investment education by participating in this workshop. The session will focus on strategic investment issues such as risk reduction through diversification, asset allocation and the tax implications of various investment choices. Look at the various investment styles and objectives of the funds available to you.
Questions and discussions are encouraged and are an integral part of this workshop.

## Personal Taxation - B: Comprehensive strategies: A longer-term perspective

"Never make anything simple and efficient when a way can be found to make it complex and wonderful." -Unknown. Now that you understand basic tax planning, you will appreciate the more advanced concepts and strategies discussed in this workshop. In this session, we will look at tax planning as a family unit, tax shelters, income splitting/ attribution, and developing an effective tax mBinimization plan. We aim to make simple what the government has made complex!

## Preparing for Retirement - B: Focus on financial planning

"Retirement kills more people than hard work ever did." -Malcolm S. Forbes. To enjoy your golden years, you should take as many stressors as possible off the table. Financial worry is a big category. You have retirement dreams ahead. It is time now to focus your financial planning activity. This workshop will take a detailed walk through the 6 steps of building a solid retirement financial plan. The session will cover financial objectives and needs in retirement, income sources, identification of problem areas and corrective measures, tax \& investment issues. This workshop ties together all the concepts we have learned so far. Finally, you will create an action plan.
"Plans are only good intentions, unless they degenerate into hard work." -Peter Drucker
Take action on what you've learned from these workshops
